WHAT WE DO EVERY DAY

We have delivered Moodle services since 2008

01

Hosting

Dedicated
infrastructure,
99.8% uptime
SLA

02

Support

Expert help,
guaranteed
response times

03

Consulting

Integration,
customization &
project delivery

04

Training

Tailored
courses, online
or on-site

05

Development

Custom plugins
built for your
needs

We turned 18 years of Moodle experience into six AI products

Each product grew out of years of interaction with our customers.

Each product starts with one question about what Moodle could do.

Each product answers one of six questions

- Create** What if building a course took an afternoon, not a term?
- Manage** What if running Moodle was just a conversation?
- Teach** What if every student could ask your course?
- Assess** What if assessment could scale without losing the teacher?
- Analyze** What if you could simply ask Moodle what's happening?
- Translate** What if one course could reach every learner?

Create

What if building a course took
an afternoon, not a term?

The screenshot shows the 'Course Builder' interface with a three-step progress bar at the top: 1. Describe (say what the course should teach, then draft), 2. Review the outline (opens when there is an outline), and 3. Build (opens after you continue from the outline). The 'Describe' step is active.

Course Builder
Describe the course (or pick reference materials to build from). The AI proposes a structured outline you can edit — nothing is created in Moodle until you decide to build it.

Buttons: Build a full course, Suggest activities for a course, Improve an existing course

What should this course teach?
e.g. An introductory course on workplace safety for new warehouse employees, with a quiz per module...

Try: Swedish for immigrants, Workplace safety, Data protection, Algebra, Elderly care, New starter onboarding. [Improve my description](#)

Ctrl + Enter drafts the outline

Ground it in your material optional — the builder writes from what you add; without it, from your description alone. [Close](#)

You can drag and drop files here to add them.

Your description

What the course should
teach

An outline

Sections and activities

You edit it

Nothing is in Moodle
yet

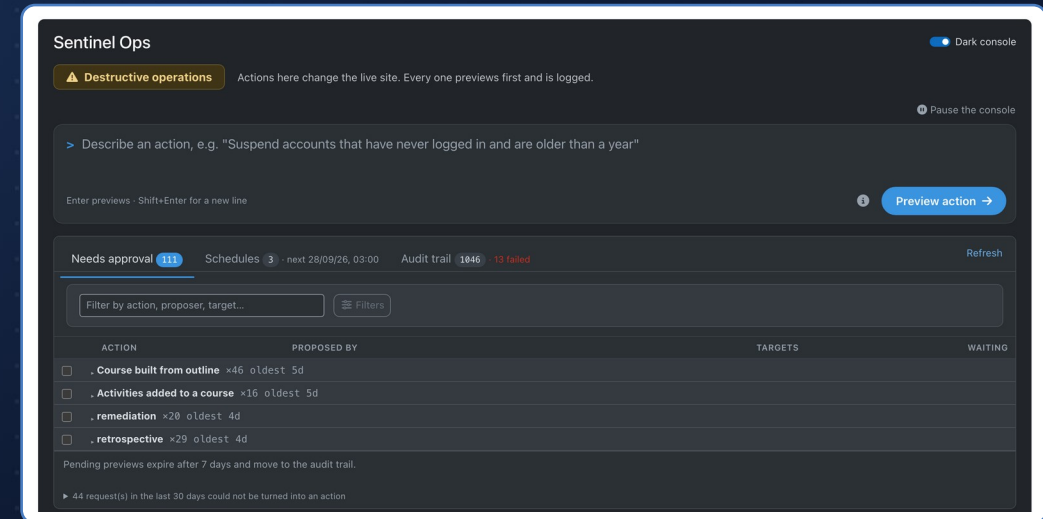

Built hidden

You publish it, or undo
it all

Manage

What if running Moodle was just a conversation?

You describe

What you want, in plain words

A preview

What it would change on your site

You confirm

Nothing changes until you do

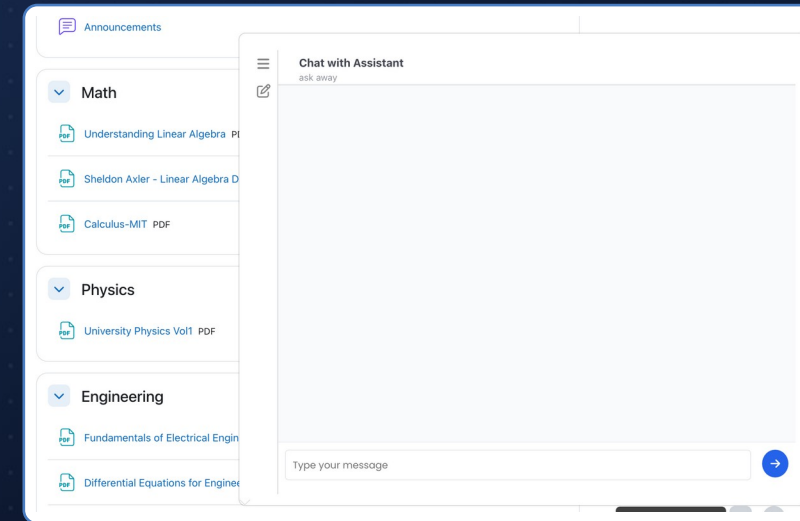

Always logged

Changes can be reversed

Teach

What if every student could ask your course?

A question

From a student, at
23:40

Your material

The documents you
uploaded

An answer

With references to your
documents

The student checks

Opens the source and
reads

Assess

What if assessment could scale
without losing the teacher?

AI Assessment Course / Activities / SFI Muntligt prov — Handla mat

SFI Muntligt prov — Handla mat

AI Assessment Settings Advanced grading Grading Attempts Design check More ▾

Välkommen till ditt muntliga prov i svenska! Du ska handla mat i en svensk mataffär. Jag är expediten. Vi pratar bara svenska. Lycka till!

Design check Not checked yet [Open](#)

Activity Settings	
Time limit	10 mins
Maximum attempts	Unlimited
Maximum exchanges	Unlimited

Grading Overview	
Participants	4
Submitted	0 of 4
Needs grading	0
unread messages	0

[View all attempts](#)

A conversation

Spoken or written

It follows up

Only from your material

Per criterion

A level, a quote and the
reasoning

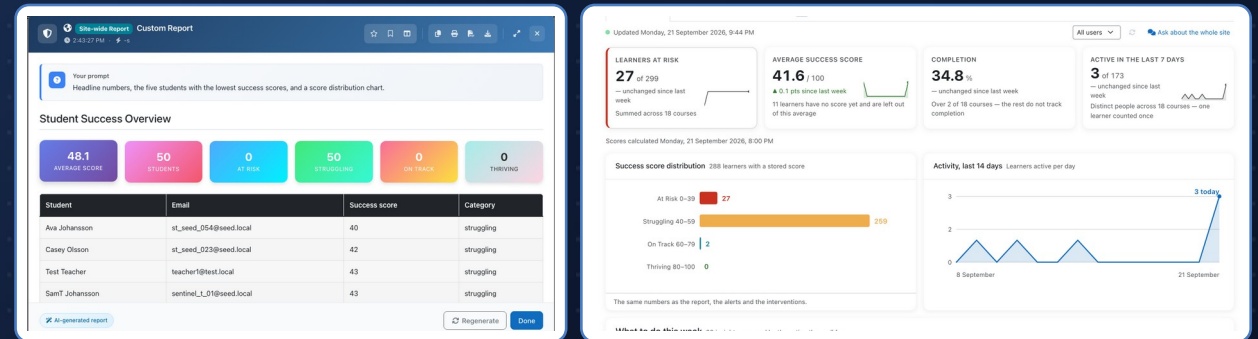

You approve first

Then the gradebook

Analyze

What if you could simply ask
Moodle what's happening?

You ask

In your own words

A proposal

Sections, columns, a
chart

Nothing runs yet

Not until you accept it

Your report

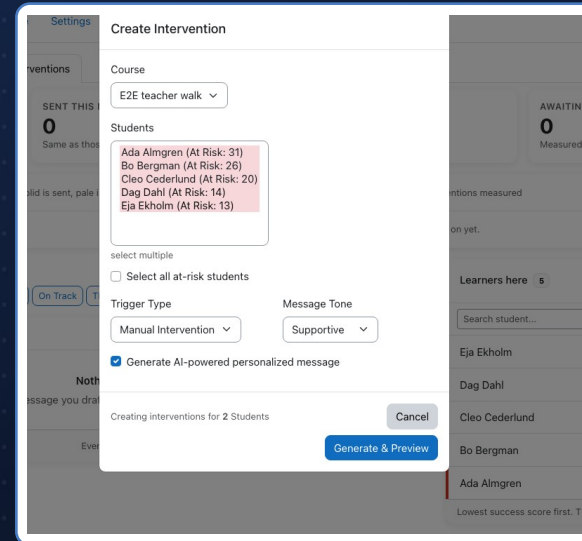

Every number comes
from your data

WHAT THE ANALYSIS IS FOR

And then somebody does something.

What if every learner who needs follow-up already had a message waiting for your approval?

The list

Who needs you this week

You choose

These five, or all of them

A draft each

Written for each learner, in their language

You send it

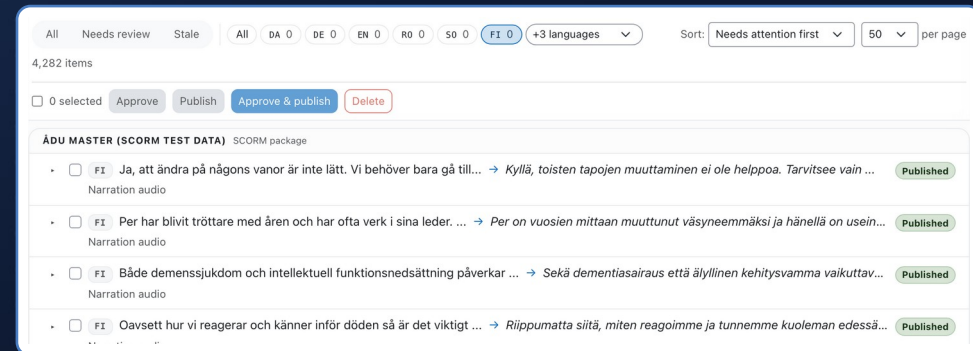

Nothing goes out unread

Translate

What if one course could reach every learner?

The same course reaches a learner in another language, and a person checks it before it is published.

THE ONE THING

Scan the code.

Every question in this talk, and what we have built against each one.

netsapiensis.se/next

Everything in this talk, in full

Our stand

Come and see it running, and bring your own Moodle questions

Nothing happens in your Moodle without you saying yes. That is on purpose.
